ASTP RESEARCH - PARTIAL DISCHARGE MONITOR NEWCASTLE SEMINAR

Patrick McMullan from EnergyAustralia will conduct this seminar in Newcastle on Wed 25th August 2010.

Overview

The ASTP (Australian Strategic Technology Program) is a group of 9 Australian Electricity Distribution and Transmission businesses, and has been established to foster research & development for the member organisations. The ASTP has been operating now for over 10 years in its current form, and in that time has established itself as the driver behind ongoing support for technology solution development for the electricity industry, especially by Universities. Its current chairman, Patrick McMullan will give a presentation on current activities and research projects, and directions for the future. This will then be followed by details of a successful research project at UNSW which developed the partial discharge monitor (PDM) for on-line insulation condition monitoring applications. Technical features about the PDM system will be presented by Toan Phung (UNSW). The device has been used successfully in the field and, for demonstration, a number of case studies on power cables will be presented by Graham Burgess (Integral Energy).

DATE / TIME: 2.30-4.30 pm on Wed 25th August, 2010

VENUE: Engineers Australia Auditorium
122 Parry St
Newcastle West

CONTACT: PMcMullan on 0407412722

COST: There is no admission cost for EESA Members or EnergyAustralia employees for this seminar.
